About Me

Senior Full-Stack Software Engineer with 6+ years of experience designing and building scalable web applications, SaaS platforms, automation systems, and data-intensive backend architectures. Strong expertise in Laravel, CodeIgniter, React, Vue, Node.js, and Python-based systems. Experienced in system design, API architecture, performance optimization, and building production-grade backend services including scraping engines and distributed data processing systems. Proven ability to lead development tasks, mentor engineers, and deliver reliable solutions in remote and fast-paced environments.

📁 Work Experiences

● Byteshake Ltd.

Senior Software Engineer Mar 2025 - Present

Led backend architecture design for scalable web systems handling large datasets and automation workflows

Built Python-based distributed scraping engine processing high-volume tender data from multiple sources

Implemented AI-powered search and filtering system to improve data relevance and user discovery

Optimized ClickHouse queries and data pipelines for faster analytics and large-scale reporting

Designed RESTful APIs and backend services using Laravel and CodeIgniter 4

Implemented AWS-based deployment architecture for scalable and reliable system operations

● CureTech Ltd.

Senior Software Engineer Jan 2022 - Mar 2025

Built scalable full-stack applications including inventory and CRM systems used for internal operations

Developed custom web scraping system for automated product data extraction and normalization

Designed REST APIs for delivery management mobile application with secure authentication flows

Worked on frontend and backend systems using Laravel, React, Next.js, and MySQL

Implemented CI/CD pipelines using GitHub Actions for automated deployment and testing

● Riadah Incubator.

Software Engineer Sep 2020 - Jan 2022

Developed multivendor e-commerce system with product, order, and vendor lifecycle management

Built CRM platform for business operations and customer management workflows

Designed and implemented large-scale scraping system to extract structured company data for marketing use

Worked with Laravel, Vue.js, Python, and MySQL in full-stack development environment

Language

English

Bengali (native)

Interest

Web Security and Ethical Hacking

IOT

Machine Learning

Extra Curricular

Managing own Technology Blogging Site

Daily Programming Problem Solving

Developing own Software Product

Blood Donor

Skills

Technical Skills

Backend & Architecture: PHP, Laravel, CodeIgniter, Node.js, Python, System Design

Frontend: React.js, Vue.js, Next.js, JavaScript, TypeScript, HTML5, CSS3

Databases: MySQL, PostgreSQL, MongoDB, Redis, SQLite, ClickHouse

API & Integration: REST APIs, Swagger, Postman, Authentication Systems

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Nginx, Apache, CI/CD

Tools: Git, GitHub Actions, Agile Development

System Design & Scalable Backend Architecture

Performance Optimization & High-Volume Data Processing

API Design & Distributed System Development

Education

B.Sc in Computer Science & Engineering

Daffodil International University May 2016 - May 2020

Participants of various Programming Contest

Member, CPC Club of DIU

Projects

Top Project Links

TapToConnect – Laravel + React SaaS platform for business automation

Tenderbase – High-scale tender aggregation and analytics platform with Python scraping engine, C# backend, Laravel services, ClickHouse analytics, and AWS deployment architecture

PickGoGift – Laravel + Vue.js gift marketplace platform

Asoug – Laravel + Vue.js web application platform

Revuity – React + Node.js + Supabase application
